DOCUMENT TYPE: Journal

LANGUAGE: English

OTHER SOURCE(S): CASREACT 145:8092

ED Entered STN: 10 Apr 2006

AB 7-(Imidazolidin-1-ylmethyl)quinolin-8-ol, an N-substituted imidazolidine, was synthesized in a one-step reaction between 1,3,6,8-tetraazatricyclo[4.4.1.13,8]dodecane (TATD) and 8-hydroxyquinoline. Obtaining this substance enhanced the scope of possibilities in the synthesis of unsym. N,N-disubstituted imidazolidines. 1H-NMR spectral studies revealed that this type of substance does not undergo ring-chain tautomerism.
